\*Weight gain of a Tubeless Ready tyre converted into Tubeless with 30g of latex (quantity issued by the Fast'Air in each tyre).

"The Tubeless Ready concept has been specially designed for XC riders looking for performance and lightness, together with maximum safety. Tubeless Ready tyres have a Tubeless structure (casing + beads) featuring latex rather than rubber for guaranteed sealing performance. The Tubeless version must be inflated using a HUTCHINSON **Fast'Air** aerosol or HUTCHINSON **Protect'Air** Max liquid preventative (as the tyre is not intrinsically airtight). It can also be mounted with a **TubeType** version if need be, i.e., with an inner tube.

The Tubeless Ready concept is best when combined with the Tubeless Version, combining extra lightness with the renowned features of the traditional Tubeless: comfort, grip and optimal output. It's not just by chance that HUTCHINSON Tubeless Ready tyres are used in competitions by **Julien Absalon** as well as many other professional racers !"
